SPOREMAX (BIOFERTILIZER)

PRODUCT DESCRIPTION

Sporemax is a bio-fertilizer which contains Mycorrhiza fungus. We formulated Sporemax by using all form of Mycorrhiza i.e spore, mycelium and root particle with vesicle in single formulation. Sporemax contain both ecto and endo spore of Mycorrhiza. After application near root zone, spore available from Ariza get activated and make symbiotic association with plant root. Here VAM (Vesicular carbuncular Mycorrhiza) grow extra as well as intra cellularly.

INGREDIENTS

Mycorrhiza i.e spore, mycelium and root particle with vesicle with carrier.

ADVANTAGES

- Help plant to get nutrients, water easily.
- Provide support to plant at the time of drought.
- Develop extra root system (tertiary root system) so increase area of nutrient and water absorption.
- Increase fertilizer use efficiency.
- Provide more stability to plant.

DOSES

4 to 6 kgs per Acre.

METHODS OF APPLICATION

Soil Application.

TARGET CROPS

Can be used in any crop like cereals, pulse, vegetables, tuber, fiber, ornamental, oil seeds and fruit crops but it cannot be used in cruciferous plants.
